LDF
LOW DENSITY FIBREBOARD
Customwood LDF Panel

Borg Manufacturing is now offering a stocked range of Ultrathick LDF panels, specifically designed to suit the commercial door market. Key features and benefits include:

- MR E-Zero resin type, to ensure the product is compatible with commercial projects that demand E-Zero emission panels.
- 925mm width available in each thickness to ensure finished doors are in compliance with wheelchair access regulations.
- Door manufacturers can save the time and expense involved in laminating thinner MDF panels together to build up doors thicker than 32mm.
- AFS Chain of Custody certified – AFS/01-31-145 (Certificate No. 251)

Recommended Fixing

When used in a solid door application, we strongly recommend the following fixing method, which is in line with the best practice already employed for hanging solid MDF doors.

1. 40mm long wood screws should be used.
2. 3mm diameter full depth pilot holes should be drilled.
3. 4 hinges should be used – bottom / middle / double hinged at the top. Be said for imported products. In many countries there are no mandatory standards or legislations limiting formaldehyde from wood products.

The following criteria should be applied for hinged installation of 2700mm high solid LDF doors:

### HINGES
- **Type**: Flat profile Non Mortice
- **Size**: 100m
- **Pin Type**: Fixed or Loose
- **No. of Screws**: Minimum of three (3) into door edge
  - Minimum of three (3) into door jamb
- **No. per Door**: Four (4)
- **Hinge Placement**: Double hinge at top
  - 1st hinge at approximately 125mm from top of door
  - 2nd hinge at approximately 350mm from top of door
  - (ensure allowance for pin removal if loose pinned)
  - 3rd hinge approximately at vertical midpoint of door
  - 4th hinge at 150 - 250mm from bottom of door
  - (See attached diagram)

### SCREWS
- **Type**: Parallel Shank, Type AB point, Countersunk or equivalent
- **Gauge**: 8G or 10G according to hinge manufacturers recommendation
- **Length**: 50mm / 2 inch
- **Pilot Hole Depth**: 50mm / 2 inch (screw length)
- **Pilot Hole Diameter**: 8G pilot hole should be 2.5 – 2.8mm
  - 0G pilot hole should be 3mm
